

JTL Shop4 Update auf JTL Shop5

**Aufgabe:**

Erstellen eines Test JTL-Shop5, basierend auf der Kopie eines laufenden JTL-Shop4's

Eine Update Anleitung gibt es bei JTL unter:

<https://guide.jtl-software.de/jtl-shop/jtl-shop-kauf-editionen/jtl-shop-updaten/>

Vorbereitungen

- erstellen einer leeren Testdatenbank (im Backend des Hosters)
- erstellen eines leeren Testverzeichnisses (z.B. per FTP Programm)
- erstellen einer Testdomain mit Bezug auf das Testverzeichnis incl SSL (im Backend des Hosters)
- kopieren der Datenbank (copy_db.php) s.h. weiter unten
- kopieren des aktuellen Shops in ein Testverzeichnis (copy_web.php) s.h. weiter unten

im neuen Webverzeichnis

- htaccess - alte URL's ausdokumentieren bzw. prüfen und ändern
- includes/config.JTL-Shop.ini.php - anpassen DB und URLs
- jetzt sollte der Shop4 als Kopie funktionieren
- Shop testen - wenn OK dann weiter

Vorbereiten für Update auf Shop5

- Backend Cache ausschalten
- Backend Plugins löschen / deaktivieren
- Wartungsmodus aktivieren
- Evtl. Datenbanken reparieren

Shop5 installieren/updaten

- aktuelle Version bei JTL herunter laden und wie von JTL vorgeschrieben die Dateien daraus entfernen

```
install (kompletter Ordner)
admin/.htaccess (nur falls Sie diese angepasst haben)
robots.txt (nur falls Sie diese angepasst haben)
shopinfo.xml
```

- PHP Version des Testshops auf ≥ 7.3 . umstellen und testen (php_test.php) siehe weiter unten
- JTL Shop5 auf WEB kopieren (z.B. per FTP)
- JTL Shop5 entpacken (unpacker.php) s.h. weiter unten

- Cookies für die Domain löschen
- Im Backend (abgesicherter Modus) anmelden
- Datenbanken updaten
- Datenbanken umstellen UTF8
- Einstellungen prüfen

- Frontend testen
- Shop freigeben
- Testumgebung ggf. mit Passwort sichern

Programme

Datenbank kopieren

[copy_db.php](#)

```
<?php
/**
 *   kopiert eine existierende Datenbank in eine neue - ACHTUNG !!! -
 *   neue Datenbank wird falls vorhanden gelöscht !!!
 */

// Source
$DB_USER_SRC = "<user>";
$DB_PASS_SRC = "<password>";
$DB_NAME_SRC = "<dbname>";

// Destination
$DB_USER_DEST = "<user>";
$DB_PASS_DEST = "<password>";
$DB_NAME_DEST = "<dbname>";

// --- ab hier nichts mehr ändern ---

// erstellt eine neue, leere DB. Wenn Sie schon vorhanden ist, wird sie
// gelöscht.
exec("mysql -u".$DB_USER_DEST." --password='".$DB_PASS_DEST.'" -e 'DROP
DATABASE IF EXISTS `".$DB_NAME_DEST.`'; CREATE DATABASE
`".$DB_NAME_DEST.`';");

// kopiert den Inhalt der vorhandenen DB in die neue DB
exec("mysqldump -u".$DB_USER_SRC." -p'".$DB_PASS_SRC.'"
'".$DB_NAME_SRC.'" | mysql -u ".$DB_USER_DEST." --
password='".$DB_PASS_DEST.'" ' ".$DB_NAME_DEST);
```

WEB kopieren

copy_web.php

```
<?php
/**
 * kopiert ein Web Verzeichnis in ein anderes (mit Unterverzeichnissen)
 * source und dest Verzeichnis sollten existieren
 */

$source = "<verz>";
$dest = "<verz>";

subdir_copy($source,$dest);

function subdir_copy( $source, $dest ) {

    echo "<h1>Copy</h1><br>";
    if (!is_dir($source)){
        echo "<b>Error:</b> ".$source." - Verzeichnis nicht gefunden";
        return false;
    }
    if (!is_dir($dest)){
        echo "<b>Error:</b> ".$dest." - Verzeichnis nicht gefunden";
        return false;
    }

    echo "From : ".$source."<br>";
    echo "To : ".$dest."<br>";

    $shellBefehl = "cp -RvpT $source $dest >>log.txt";
    /**
     * cp Parameter
     * R rekursiv = mit Unterverzeichnissen
     * v verbose = vergleichen
     * p preserve = mode,ownership,timestamps - kopiert mit Rechten
     * T no-target-directory = keine Zielverzeichnis
     */

    exec($shellBefehl, $output, $return_var);
    var_dump($output, $return_var);
}
```

PHP Test

php_test.php

```
<?php
/**
 * Anzeige des aktuellen PHP Version mit allen Info's
 */
phpinfo();
?>
```

entpacken

[unzipper.php](#)

```
<?php
/**
 * The Unzipper extracts .zip or .rar archives and .gz files on
 * webserver.
 * It's handy if you do not have shell access. E.g. if you want to
 * upload a lot
 * of files (php framework or image collection) as an archive to save
 * time.
 * As of version 0.1.0 it also supports creating archives.
 *
 * @author Andreas Tasch, at[tec], attec.at
 * @license GNU GPL v3
 * @package attec.toolbox
 * @version 0.1.0
 */
